

TC09 Project, Jurong Island

Singapore

Jurong Island is a significant industrial hub located off the southwestern coast of Singapore, primarily dedicated to the petrochemical and chemical sectors. The island was developed in the late 1990s by merging several smaller islands, transforming it into a world-class facility that supports large-scale manufacturing.

Spanning approximately 3,200 hectares, Jurong Island boasts a robust infrastructure designed to accommodate the needs of its numerous multinational corporations. These companies benefit from the island's strategic location, access to deep-water ports, and proximity to regional markets. In addition to its industrial focus, Jurong Island is committed to sustainability and innovation. The government encourages the use of advanced technologies and practices to enhance environmental performance and efficiency. This includes initiatives for cleaner production processes and the development of eco-friendly solutions. Overall, Jurong Island is a cornerstone of Singapore's economy, contributing significantly to the country's position as a global leader in the chemical industry while prioritizing sustainable development.
